

TD 404

Deposit Solution Banknotes and coins

For companies that value cash management and control in real time.

BENEFITS

EFFICIENCY

Greater automation of administrative tasks and control reverts into overall cost reduction.

FLEXIBILITY

A solution that fits the customer's needs and is easy to integrate in the company's management system.

SAFETY

Based on latest technology, this solution allows the detection of suspicious banknotes and significantly reduces the risk of robbery.

EXPANDABLE

The processing capacity can be increased by simply adding equivalent modules with or without processing.

BUSINESS AREA

TD404 is a coin and banknote Deposit Equipment for small and medium businesses. It is suitable for small and medium-sized retail (e.g., local retail and services) and any other business where the cashiers are autonomous and need to be accountable at the end of the day.

Accepts Coins

ZGS | WEB PLATFORM

Our deposit solution offers all stakeholders information management in real time, ensuring process efficiency and maximizing equipment profitability. From the cashier to the company management, the information can be managed in real time according to the internal process. Decisions are based on management information.

ADAPTABILITY

Adapted to situations where there are several points of sale, with great mobility of human resources and several shifts, allowing a central consolidation of information with an integration in management ERP's.

GROUP CONCEPT

This solution allows information control and manage in a centralized and hierarchical way. If the company wants to have multiple points of collection, this solution not only allows employee mobility, but also ensures information control and centralization. On the other hand, if various companies want to share a collection point, they may do so in a secure manner; since the solution has the possibility to classify and prioritize information to each one of the companies.
